Dina,

Here you go. Because a majority of the information has been archived, I had to run it in two separate reports. You will see the way the database deals with archived information, the report is listed by individual instead of date. I think if you are looking for individuals that accessed the space, instead of who went in on a specific date, this will probably work better for you anyway.

Warning, do not open this file without a free couple minutes, its fairly large.

11 works better. I have meetings in the morning "Ryan.Breslin@schneider-electric.com" wrote:

Dina, I can come in around 10 if that works. How about I spend some time going through all the reports with you, then I can run the reports I need to run to delete the spare groups, and go through and delete those?

If you can come in, it would be great. I will be here all day. I need you to go through the reports with me any ways. I am a bit skeptical about running the report during the day because it is such a large amount of data, it may crash the system.

Let me know what time you will be here, so I can make myself available.

Thanks...Dina

Dina,

I am not very proficient with running SQL queries. I know it can be done through InetSeven Reports. The report is called TransactionsDoor. I believe it is in the folder I made for Kathy. If you need me to come to site to create it I could, possibly tomorrow. Let me know, thanks.

**Subject:** 3 West iNet data

Hi Ryan,

We received a request to list of all the individuals that accessed the 3 West wing from when the system was installed to present. I know there are a number of reports that can be generated from the system to produce this information, but this seems to be a larger amount of data from what is normally generated from the reports. I checked my records and the system was activated on March 1, 2011. Data would need to be captured from hallway and stairwell doors in the 3<sup>rd</sup> Floor West group. Data needed includes, by door, the date and time the door was accessed and who accessed the doors. The individual needs to be identified by name and badge number.

Please let me know if it would be easier to run a SQL query and produce a dbf rather than running iNet reports because running reports for this time frame seems like a very time consuming and tedious process.

Thanks...Dina
